

Alloy Practice Field Complex

FieldComplex.als contains a skeleton for solving the following problem. An athletic complex has a number of fields on which games are scheduled for a specific date. There is only one game per date played on a given field (i.e no times).

1. Games **not** on the schedule have no associated field or date.
2. Games that **are** on the schedule have one field and one date
3. Games on the same field are scheduled for different dates.
